

Global Solution Provider

AI | Data | Solutions | Business Transformation

Capability statement

GSP helps organisations move from AI ambition, data complexity and transformation strategy into practical, governed and delivery-ready solutions. The focus is on clarity, trusted information, outcome-led solution design and business enablement.

AI Enablement	Trusted Data	Solutions	Transformation
- AI use-case shaping - GenAI readiness - Governance and adoption	- Data foundations - Metadata, lineage, quality - Ownership and controls	- Solution design - Integration and cloud choices - Security and resilience	- Roadmaps - Operating models - Delivery assurance

Principal resource: Aly Hassan

Aly Hassan is an enterprise architecture, AI, data and business transformation resource focused on helping organisations design practical solutions, strengthen information foundations and move complex transformation initiatives toward governed delivery.

Best-fit engagements

- AI and data strategy shaping workshops
- Data governance, metadata, quality and lineage foundations
- Solution design and architecture review
- Business transformation roadmap and operating model definition
- Delivery assurance for complex data, AI and digital programmes

Thought leadership and resources

Enterprise Information Intelligence - a strategic architecture blueprint for governed, AI-ready information ecosystems. The publication connects business meaning, data architecture, governance, semantic models, AI platforms and transformation into a practical reader journey.
